

# AUM Math Club

Tuesday, October 8, 2019

12:00-1:15 PM

Taylor Center Rm 230

Electricity is generated in many ways and transported all over the world via a high voltage distribution network known as the power grid. When a natural disaster happens, linemen have the dangerous job of repairing the grid. Why not use a robot instead? The BEST Robotics Competition for middle schools and high schools challenges teams to develop a robot to repair the grid when catastrophe happens.

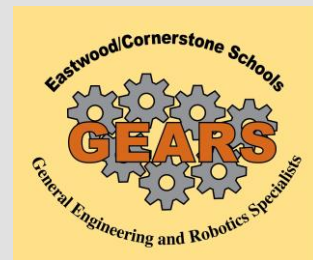

Eastwood/Cornerstone Schools' GEARS Inc. Robotics Team has constructed a robot to fulfill the challenge. The team will demonstrate their robot and give a presentation about their team.

12:00 Pizza

12:15 Robot  
Demo and  
Presentation

Demo by:
